DIAMETER BREAKDOWN OF OLYMPIC PARK STREET TREES

The top 5 most common species listed are representative of the current urban forest. Due to climate change and water availability these species may or may not be recommended for future plantings.
OLYMPIC PARK’S UNIQUE AND DISTINCT TREES
Noteworthy trees may represent iconic species, display a unique growth form, or stand out for their size at maturity. These trees provide significant benefits to the neighborhood council district and are listed below.

**Southern Magnolia (Magnolia grandiflora) Abundant Species**
Southern magnolia is known for its fragrant, showy flowers. This species is known to attract pollinators and birds. It has glossy, evergreen foliage, a rounded shape, and can reach a spread of 60 ft.

**London Plane Tree (Platanus x hispanica) Abundant Species**
London plane is a large statured hybrid that can reach a height of 85 ft and spread of 70 ft. Several characteristics, such as the multicolored bark and achenes (the fruit/seed produced) make this species aesthetically pleasing.

**Mexican Fan Palm (Washingtonia robusta) Abundant Species**
Mexican fan palm can reach a height of 100 ft and a spread of 10 ft. This species has evergreen foliage and is tolerant to most environments. Mexican fan palm is native to Mexico but well adapted to California's south coast.

**Jacaranda (Jacaranda mimosifolia) Abundant Species**
Jacaranda is known for its showy, fragrant flowers. Jacaranda blooms in the early summer and sometimes again in the fall. This species reaches a spread of 30 ft and attracts birds.
